

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1 (previously presented). A method of imparting flame retardant properties to a polyurethane reactive hot melt adhesive comprising adding an effective amount of ethylenebistetrabromophthalimide and/or tris(2,3-dibromopropyl)isocyanurate as a fire retardant during manufacture of the reactive hot melt adhesive.

2 (cancelled).

3 (cancelled).

4 (currently amended). A polyurethane reactive hot melt adhesive comprising an isocyanate, a polyol and a fire retardant selected from the group consisting of ethylenebistetrabromophthalimide, tris(2,3-dibromopropyl)isocyanurate and mixtures thereof.

5 (original). The adhesive of claim 4 wherein the isocyanate is a diisocyanate or a polyisocyanate.

6 (original). The adhesive of claim 5 wherein the fire retardant further comprises a chlorinated paraffin, an aryl phosphate ester and/or antimony trioxide.

7 (original). The adhesive of claim 4 wherein the polyol is a polyether polyol, a polyester polyol or a mixture thereof.

8 (original). The adhesive of claim 7 further comprising an acrylic copolymer.

9 (previously presented) The adhesive composition of claim 8 prepared by reacting from about 5 to about 50 parts by weight of an isocyanate, from about 1 to about 70 parts by weight of a polyol, about 0.1 to about 40 parts by weight of an acrylic resin and from about 1 to about 50 parts by weight of ethylenebistetrabromophthalimide and/or tris(2,3-dibromopropyl)isocyanurate.

10 (previously presented). The composition of claim 9 further comprising about 0 to about 10 parts by weight of a chlorinated paraffin and/or about 0 to about 10 parts by weight of an aryl phosphate ester, as a further flame retardant component.

11 (previously presented). A method for bonding articles together which comprises applying a reactive hot melt adhesive composition according to the method of claim 1 in a liquid form to a first article, bringing a second article in contact with the composition applied to the first article, and subjecting the applied composition to conditions which will allow the composition to cool and cure to a composition having an irreversible solid form, said conditions comprising moisture.

12 (original). An article of manufacture comprising the adhesive of claim 4.

13 (original). The article of claim 12 which is an entry door.
